

Do Comments follow commenting conventions? A case study in Java and Python

Pooja Rani, Suada Abukar, Nataliia Stulova,

Alexandre Bergel, Oscar Nierstrasz

University of Bern, Switzerland

```
/** Event fired when a spacer element is hidden or shown in Escalator
 *
 * @author Vaadin Ltd
 * @since 7.7.13
 */
```

```
public class SpacerVisibili {
    System.out.println(..);
}
```

```
// This class fires an Event when a spacer element is hidden or shown in  
the Escalator. I am the author of this class.
```

```
// It is present in the project since the version 7.7.13 and might  
delete in the next versions.
```

```
public class SpacerVisibili {  
    System.out.println(..);  
}
```

No strict convention for their style & syntax

Coding Style guidelines

E.g., Oracle comment guidelines

- First sentence should summarise the class
- Use phrases instead of complete sentences
- Use third person instead of second person

Do developers follow these guidelines?

```
/** Event fired when a spacer element is hidden or shown in Escalator
 *
 * @author Vaadin Ltd
 * @since 7.7.13
 */
```

- First sentence should summarise the class
- Use phrases instead of complete sentences
- Use third person instead of second person

Does this comment follow the guidelines?

Does it not?

```
/** Event fired when a spacer element is hidden or shown in Escalator
 *
 * @author Vaadin Ltd
 * @since 7.7.13
 */
```

- First sentence should summarise the class
- Use phrases instead of complete sentences
- Use third person instead of second person

Does this comment
follow the guidelines?

Does it not?

How to identify class comment types? A multi-language approach for class comment classification 

Pooja Rani^{a,*}, Sebastiano Panichella^b, Manuel Leuenberger^a, Andrea Di Sorbo^c, Oscar Nierstrasz^a

^a Software Composition Group, University of Bern, Switzerland
^b Zurich University of Applied Science, Switzerland
^c Department of Engineering, University of Sannio, Italy

Analyzed Java and Python class comments **but not against the style guidelines.**

Dataset

Do developers follow commenting guidelines for Java and Python comments?

Dataset

Apache Hadoop

Apache Spark

Eclipse.cdt

Google Guava

Google Guice

Django

iPython

Mailpile

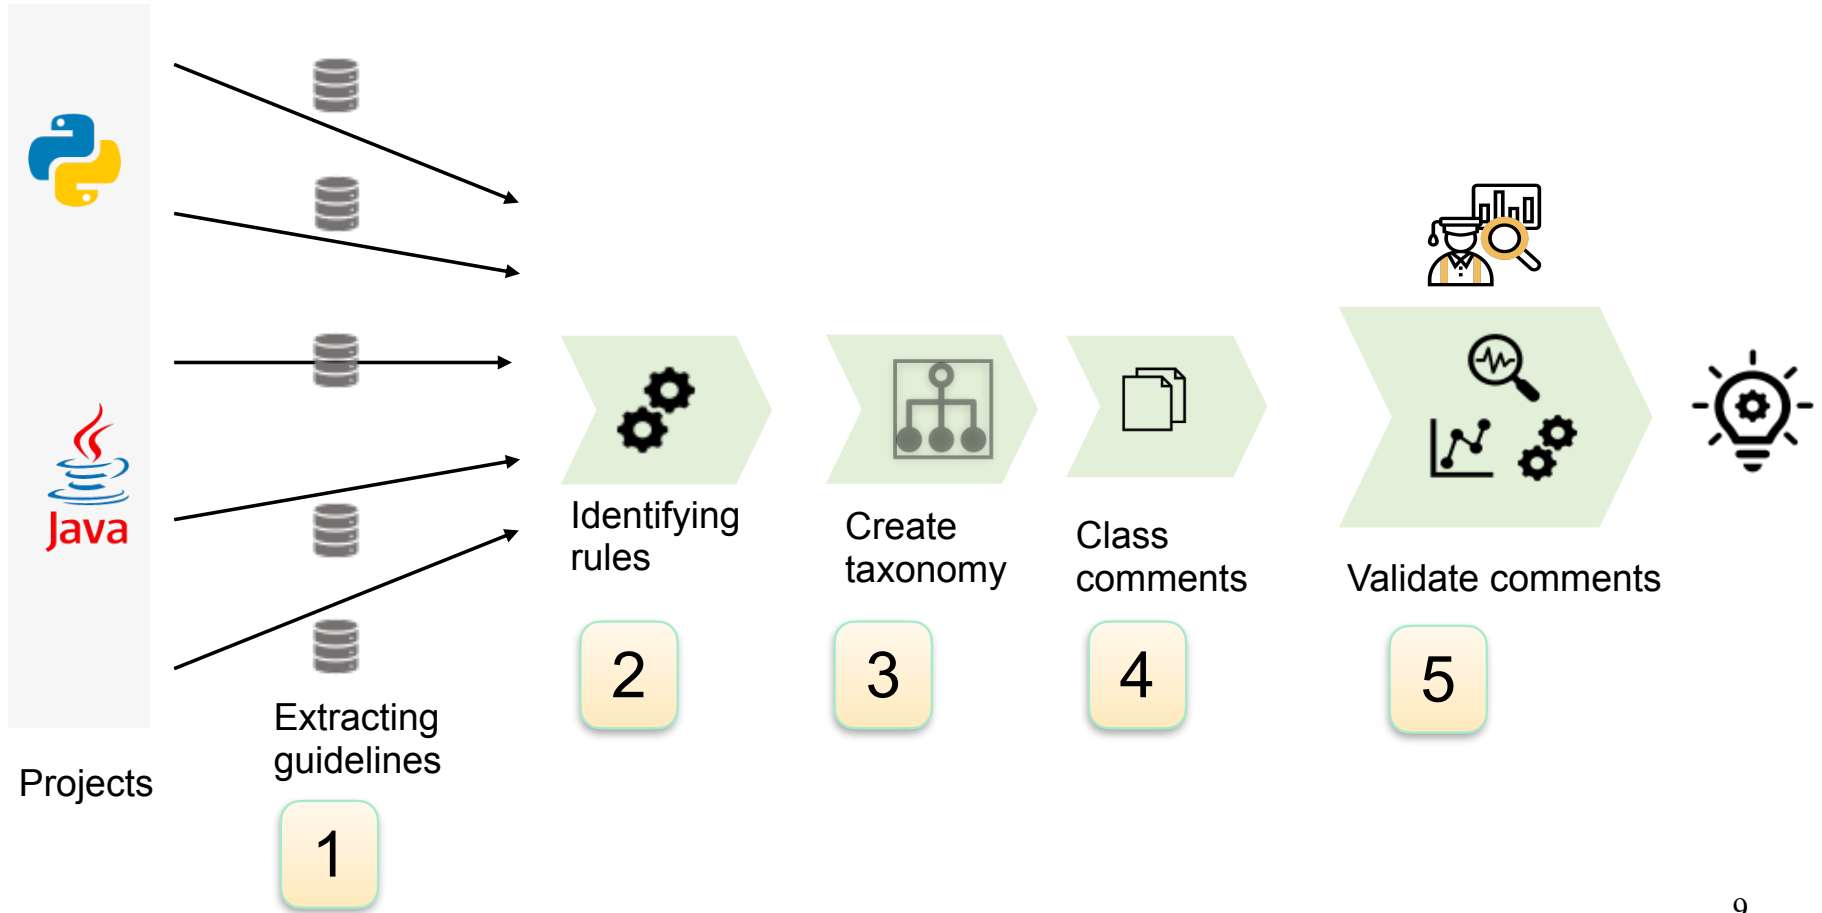

Pandas

Pipenv

PyTorch

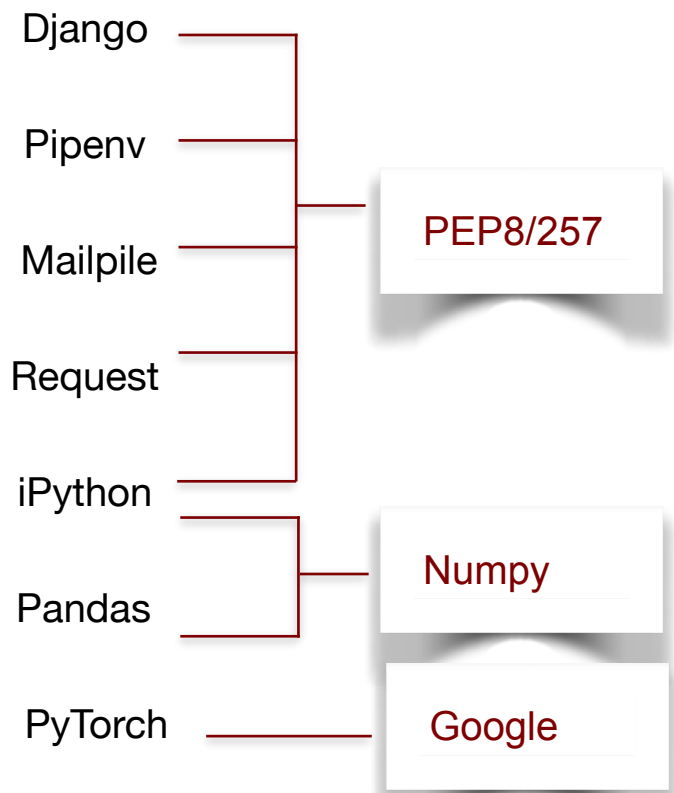

Requests

Methodology

1

Extracting guidelines

2 Identifying rules

Multi-line Docstrings

Multi-line docstrings consist of a summary line just like a one-line docstring, followed by a blank line, followed by a more elaborate description. The summary line may be used by automatic indexing tools; it is important that it fits on one line and is separated from the rest of the docstring by a blank line. The summary line may be on the same line as the opening quotes or on the next line. The entire docstring is indented the same as the quotes at its first line (see example below).

4

3 Create taxonomy

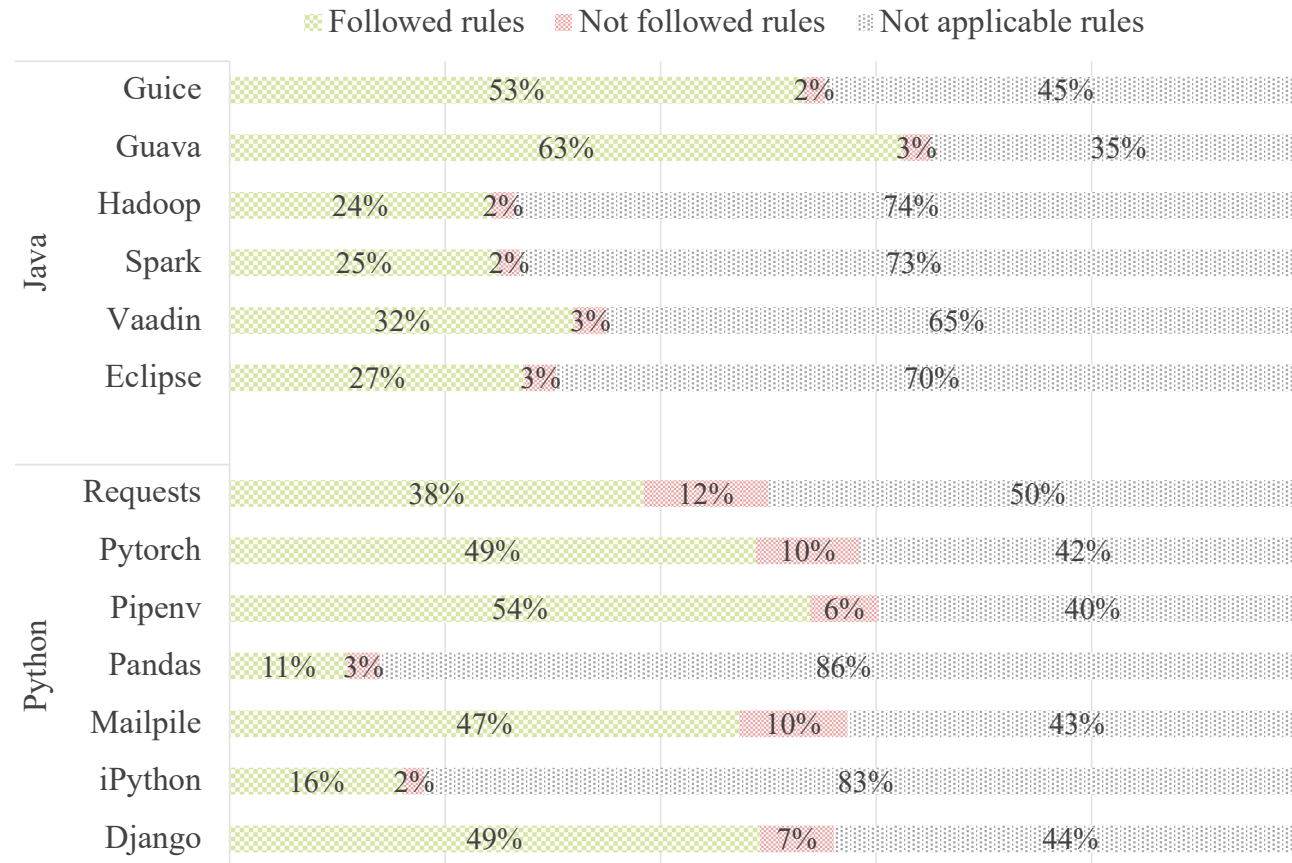

RQ1: Types of comment conventions?

Content rules are more prevalent in style guidelines but hard to locate

RQ2: Do developers follow conventions?

Developers do not always adopt comment conventions
(Not applicable rules)

RQ2: Do developers follow conventions?

```
/** @author Vaadin Ltd
 *
 * @since 7.7.13
 */
```

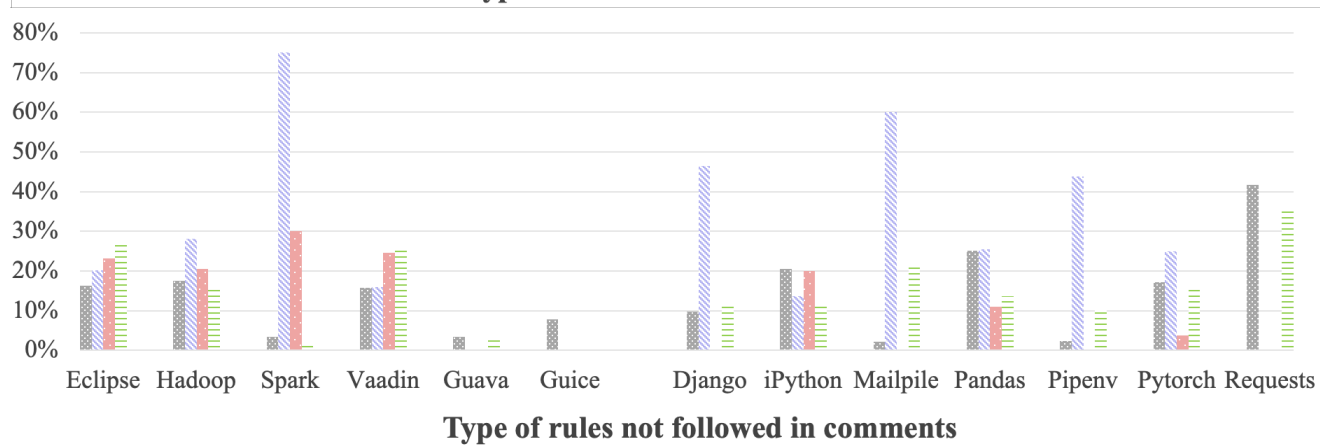

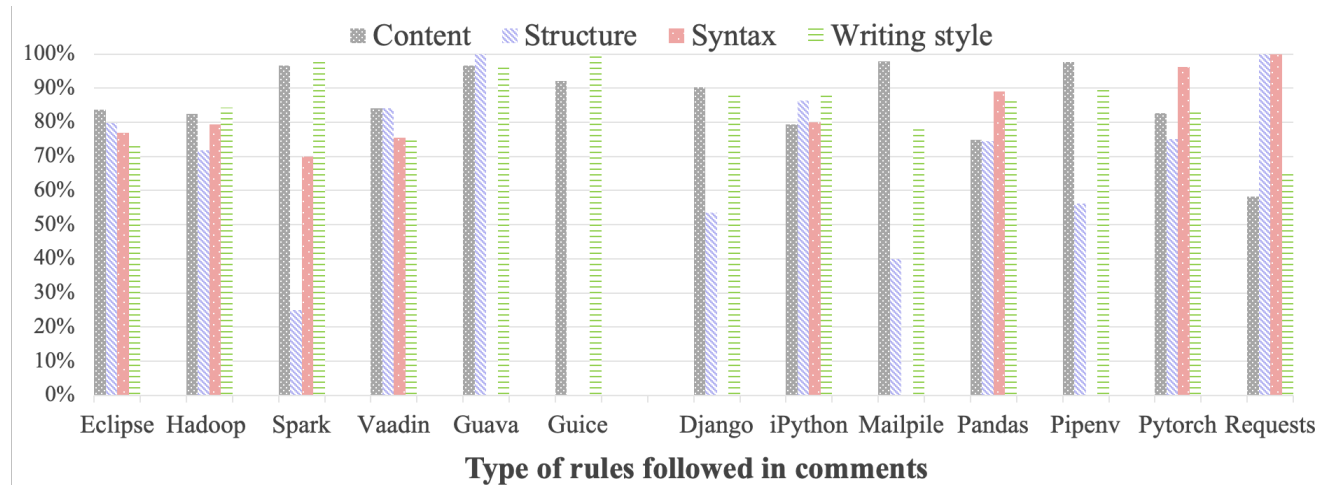

■ Not followed rules

■ Not applicable rules

- First sentence should summarise the class
- Use phrases instead of complete sentences
- Use third person instead of second person

RQ2: Do developers follow conventions?

Comments often follow **writing style** and **content** rules than other rule types

Future work

Verify other types of comments (Method, inline comments)

Verify comments of other languages (C++, JavaScript)

Develop tools to validate comments against the guidelines

Improve comment quality assessment
